EDUCATION

Nanjing University of Information Science and Technology

Bachelor of Science - Statistics

Nanjing, China Sep 2017 - June 2021

Zhejiang Gongshang University

Master of Science - Statistics

Hangzhou, China Sep 2021 - Jan 2024

SKILLS SUMMARY

Python, C, SQL, LATEX, Bash • Languages

• Frameworks PyTorch, TensorFlow, PyG, DGL, Scikit

EXPERIENCE

Zhejiang Lab - Research Center of Graph Computing

Algorithm Intern July 2022 - Aug. 2023

AI for Science

- OGB-LSC 2022: Focus on large-scale molecular learning and achieve 11th place globally.
- o Molecular learning: Reproduct and deploy large-scale molecular pretraining methods and molecule conformation generation methods;
- o Survey on diffusion-based graph generation: Write the survey on diffusion-based graph generation methods, whose applications range from molecule design to motion synthesis;
- o Diffusion-based molecule generation: Build up a E(n) denoising kernel and come up with a loss function that promote 3D molecule generation performance.

Publications

- A fairness-aware graph contrastive learning recommender framework for social tagging systemsPublished at "Information Sciences" (JCR Q1 & CCF-B)
- Pursuit and Evasion Strategy of a Differential Game Based on Deep Reinforcement Learning Published at "Frontiers in Bioengineering and Biotechnology'

Projects

Fairness-aware Recommender Systems

- o Build up Tag-Aware Graph Contrastive Learning (TAGCL) and significantly improve performace and fairness of tag-aware recommendations;
- o Separately build up user-tag and item-tag graph, and perturb both graphs by normalized noise to embeddings to set up self-supervised learning tasks;
- o Propose the training objective based on InfoNCE loss, negative tag sampling loss and TransT regularization, which jointly promote accuracy, fairness and consistency bewteen two graphs;
- Experiments indicate TAGCL outperforms state-of-the-art baselines by at least 5 % while being less discriminative.

• Open Graph Benchmark Large-Scale Challenge (OGB-LSC) 2022

- Build up HFAGNN for large-sacle (over 3 million) molecular property prediction;
- o Build a equivariant hybrid module, which extracts atom chemical properties and 3D geometry information using bessel fuction. The module combines topology and geometry information together efficiently;
- Implement the model with multi-gpus training and achieve the 11th place in the leaderboard.

• Diffusion-based Molecule Generation (Work in Progress)

- Build up a effective denoising kernel of diffusion process, which generats novel and valid 3D molecules from scratch;
- By combine the intrinsic feature of diffusion model with the nature of ineratomic force, construct a effective denoising kernel.

• User Item Value Evaluations and Personalized Recommendations in E-Commerce

- o Based on real e-commerce data, the study aims to evaluate the value of products from the aspects of profitability, sales level, and return rate, and to effectively segment user groups based on product value. Then, personalized recommendations are made for users;
- Based on LightGCN, WideGCN is proposed to effectively utilize side information. The performance lift over sota methods is around 2% to 5%.

• Pursuit and Evasion Strategy of a Differential Game Based on Deep Reinforcement Learning

- o Construct kinematic equations of differential persuit-evasion problem and solve the kinematic persuit and evasion strategy respectively;
- Use DQN and DDPG alogrithm to train the agent escape automatically;
- Devise the reward function to further improve the sucess rate of escaping.

• Spatial anti-interference UWB positioning algorithm

- o Construct the UWB positioning algorithm based on 3 and 4 anchors respectively;
- Discriminate whether the observed data is interfered using SVM.
- o Using the above algorithm and Kalman filter, the trajectory in 3D space is.

Honors and Awards

- 2018 National English Competition for College Students First Prize- May, 2012
- $\bullet\,$ The 18th China Post-graduate Mathematical Contest in Modeling Third Prize Oct, 2021
- ullet The 5th National Post-graduate Case Competition for Applied Statistics Third Prize Aug, 2022
- \bullet Zhejiang Gongshang University Post-graduate Merit Scholarship First Prize Nov, 2022
